ABOUT ME

I am Mr. Kittipat Chubua. I have completed an internship at a company as a PHP programmer for 7 months. Therefore, I am very interested in website development and am ready to learn and develop myself in this career.

PROJECT

WEB-SEAL

- This project is developed using PHP language, laravel framework to develop a shoe trading system. This shoe selling system will have various usage features such as login, member registration, adding, deleting, editing various data and separating the user system such as administrator, accountant and system user. This system will use oracle sql developer database connection.

ComSci Gadget Shop

- This project is developed using the vue.js framework to develop a notebook trading system. This notebook trading system will have various features such as login, registration, adding, deleting, and editing data. This system will use a Mysql workbench database connection. This project is not yet complete because I had only 2 weeks to do it while studying.

VueBookShop

- This project is developed using the Vue.js framework to develop a book trading system. This book trading system will have various features such as login, membership, adding, deleting, and editing data. This system will use Mysql workbench database connection.
-
